Tank cleaning services in Kuwait

AJC is the leading provider of tank cleaning services in Kuwait. We provide extensive and high-quality services for water tank cleaning. Our teams are the most experienced in the Kuwait and routinely clean water tanks in numerous homes and factory's every week.

We provide tank cleaning services for:

- Residential apartments
- Schools, colleges and universities
- Hospitals
- Hotels and restaurants
- Shopping malls and supermarkets
- Gyms and health centers
- Offices and showrooms

When a water tank is used again and again for water supply, residue and sediments get accumulated along with bacteria, which can make the water harmful for usage. Thus it needs to be cleaned periodically to ensure continued pure water supply. Kuwait Municipality advises cleaning the water tanks every year.

We follow a 4 step procedure to clean your water tank:

Step 1: Dewatering the tank

A dewatering pump is used to empty the tank first to make sure that no water is left in the tank.

Step 2: Cleaning process

The tank is cleaned with the help of a special cleaning kit by experts. It is thoroughly scrubbed with the use of machines as well as manually to remove any kind of dirt and fungus.

Step 3: Anti-bacterial spray

An antibacterial solution is sprayed inside the tank in every corner so that no part is missed. The tank becomes absolutely clean and safe to use.

Irrigation Tank Cleaning and Sewage Tank Cleaning

When water is continuously stored in a tank, it makes the water as well as the tank impure. We at AJC use scientific methods to clean irrigation tanks. We use less reactive chemicals and disinfectants to clean the irrigation tanks and reuse it only after proper cleaning.

Sewage tanks collect all the liquid waste which comes from toilets, bathrooms, sinks, washing machines etc. This makes sewage tank cleaning very important to maintain its proper functioning and keep the system in good order.

Contact AJC for all your tank cleaning services. We will not let any stone unturned to provide the best tank cleaning service in KUWAIT

Sewage Lift Station Cleaning in KUWAIT

A sewage lift station is used to pump wastewater from a lower to a higher elevation. It consists of a well where the sewage is disposed of temporarily. When the sewage reaches a specific predetermined level, a lift pump lifts it through a pipe system also called the lift station. The lift station discharges the sewage through a manhole into a treatment plant

Sometimes the lift stations become quite greasy due to the nature of the waste going into it. Once this grease builds up on the pumps, the whole system of lift stations becomes inefficient or even stops working which may damage it permanently. Thus a proper and effective cleaning system is required to enhance the efficiency of lift stations and to ensure the proper disposal of waste.

Water Tank Cleaning with high-tech machinery

स्वच्छ भारत
एक कदम स्वच्छता की ओर

At AJC, we believe that cleaning must be done once you see the first-minute signs of grease or debris appearing. Lift stations should be monitored regularly to avoid permanent damage. We use the best techniques to clean sewage lift stations. The most popular technique we use is water jetting method which ensures that no amount of dirt is left inside. The lift station is sanitized also to free it from the accumulated germs.
